

SmartLog™

End to End Audio-Video Workflow Solution

Encode, Record, Index, Mark-up, Annotate, Edit and Archive Digital Audio and Video

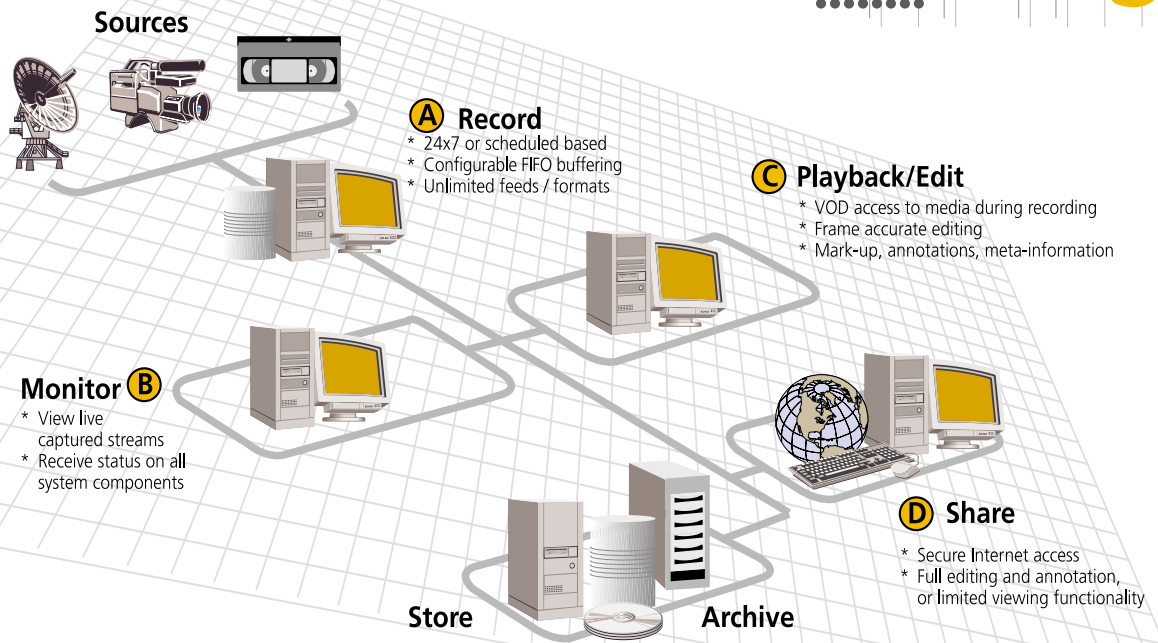

SmartLog is an end-to-end video and audio workflow management platform. This modular, flexible, easy-to-use system provides everything required to streamline video and audio workflows. The system's components handle all "rich-media supply chain" aspects including:

- capture and encoding to and from a variety of formats.
- recording on a 24x7 and scheduled basis.
- powerful automated indexing capabilities.
- user-friendly search-through, viewing, mark up and annotations.
- archiving and publishing.

SmartLog has already been tailored to key industry-specific workflows. In addition, the system's modular infrastructure, together with the User Interface and Server SmartLog APIs (SAPI), allows it to efficiently and rapidly be fine-tuned to specific user requirements.

Here are just some applications where SmartLog is used to increase efficiency and productivity:

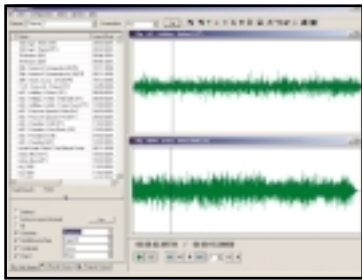

- Video Production Work-flow and Archiving
- Legislative and Local Government
- Military and Civil Intelligence
- Judicial Proceedings
- Surveillance and Homeland Security

Sample Implementations

Government and Parliamentary:

Utilize SmartLog to record Parliamentary or Judicial hearings - index, transcribe and make them available for real-time streaming or instantaneous VOD.

Intelligence:

SmartLog is used to capture a variety of open as well as internal sources, in different forms and formats. Users can obtain pinpointed access to the material, filter and mark selected segments for further analysis, and pass those down the information supply chain.

Video Production Work-flow and Archiving

SmartLog is a versatile solution for a multitude of video production work-flow and archiving tasks in non-broadcast and broadcast environments. Handling all work flow aspects from capture, FIFO recording, specific work-flow oriented tagging, annotation, management, and long term archiving and retrieval.

Media Monitoring:

SmartLog is being utilized across the globe as a leading media information platform, allowing 24x7 capture and analysis of broadcast channels, together with advanced automated indexing capabilities including fingerprinting and speech recognition.

STREAMLINE YOUR WORKFLOW

Monitor data in real time. Automatically detect topics of interest and transcribe them.

REAL TIME STREAMING AND INSTANTANEOUS VOD

SmartLog allows simultaneous recording indexing and streaming for VOD applications.

RAPID CUSTOMIZATION TO DEDICATED WORK-FLOWS

Modular architecture and user-interface API allow rapid customization to industry and user specific work-flows.

YOU DON'T HAVE TO BE A MEDIA PRO

User-friendly interface to powerful media management tools.

POWERFUL DESKTOP FUNCTIONALITY

Advanced tools, like frame-accurate editing and topic detection for extracting and repackaging information.

FORMAT AND HARDWARE AGNOSTIC

Support for multiple video and audio formats including, but not limited to: MPEG-2, Windows Media, MPEG-4-ISO and WMT; Linear PCM, MPEG-1L2, MP3, mono or stereo audio.
